

SmartLinc Process Shipper

Process Shipper, developed by SmartLinc, is a feature rich, multi-carrier 'Pack & Ship' system designed for printing businesses. Process Shipper has been engineered to integrate and streamline the shipping process, helping your business to minimize costs without the need for an expensive, highly customized shipping solution.

EFI's portfolio of integrated solutions increases productivity and improves your bottom line. Find out more at www.efi.com.

Process Shipper is a web-based, fully scalable shipping system that can be deployed at a single location or multiple locations throughout your company. The software is loaded on your central server and then mapped to your workstations as needed to accommodate your shipping demands. Whether you ship several packages per day or thousands, Process Shipper can execute your shipments with the speed and accuracy you would expect from a state-of-the-art system.

This multi-carrier shipping system incorporates all of the carriers you currently use into one single shipping system: UPS™, USPS®, FedEx®, DHL, as well as LTL and full truck load carriers, in addition to your company vehicles or regional carriers.

Process Shipper, developed with Microsoft®.Net technology, utilizes an SQL database and integrates with your EFI Monarch, EFI Logic™, EFI PSI™, EFI Pace™ or EFI Hagen™ Print MIS solution. EFI™ provides first level support, while SmartLinc provides advanced support and ongoing development. When shipments are executed in Process Shipper, all charges and tracking numbers are automatically updated to your EFI Print MIS. Customers are provided with an e-mail notification which can include the shipment date, the carrier, and the freight cost. Shipment tracking numbers can also be included, with a hyperlink to the carrier's website. Tracking shipments has never been easier.

You have worked hard to negotiate good shipping rates for your business. SmartLinc helps you to keep these savings by streamlining the shipping process, eliminating double entries, and providing accurate information for tracking, support, costing and invoicing.

Features and Benefits

- Delivers an easy-to-implement solution with a typical ROI of six months.
- Includes support for all types of carriers including regional and generic.
- Eliminates duplication of efforts and rekeying errors.
- Improves visibility into shipping status and costs.
- Builds customer confidence and reduces inquiry call workload with advanced ship notifications and Proof of Delivery via e-mail.
- Connects to multiple databases.
- Provides audit labels and on-demand shipping reports.
- Includes pack verification with line item detail.
- Supports faster shipping and same day invoicing.
- Automates freight markups and 3rd party shipping.
- Eliminates EOD closing.
- Supports Endicia® postal manifesting and Internet postage.
- Provides residential delivery indicator.
- Offers Best Way Shipping, LTL rate shopping and FTL processing.
- Supports custom label production.
- Includes advanced administrative controls.
