Supply chain execution that fits your business
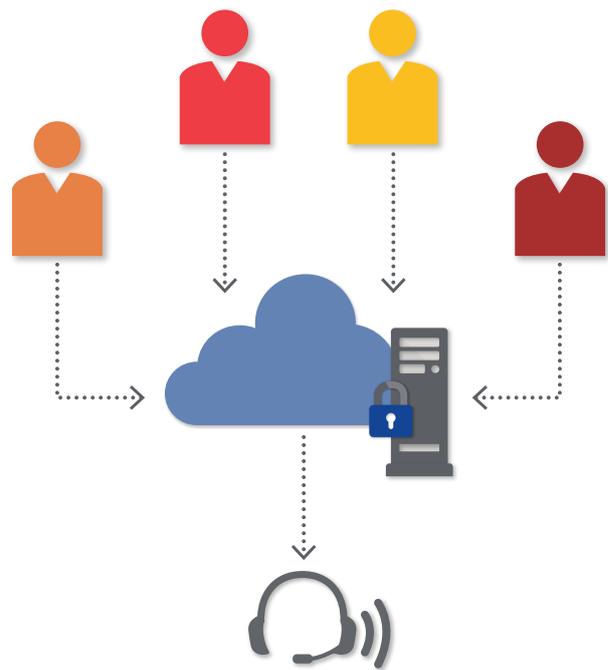

CorrChain® connects you with your customers and suppliers to help you build dynamic supply chains.

Available as part of the complete EFI™ suite of manufacturing solutions — or as a standalone product — the CorrChain Supply Chain Execution (SCE) module enables packaging manufacturers to better manage the flow of materials and information across their supply chains. CorrChain will allow you to manage supplier and customer relationships, optimise inventory, and improve growth and profitability.

Business benefits

- Increases value across your supply chain

- Increases customer loyalty

- Reduces costs

- Lowers inventory levels

- Improves customer service

- Reduces transaction costs

- Improves visibility across your supply chain

CorrChain is a collaborative, secure, and automated supply chain solution designed specifically for the packaging industry.

Features and functions

CorrChain is a collaborative, secure, and automated supply chain solution designed specifically for the paper packaging industry. It allows packaging manufacturers to integrate with their customers and suppliers — and improve internal communication. The module operates in a secure, private Internet environment. EFI hosts, manages, and maintains the servers — because of this you don't have to invest in additional hardware, and have no software to deploy or maintain.

Your supply chain partners can access the CorrChain solution via a secure private Web portal, with access to real-time order, production, and shipping information — but CorrChain also takes things one step further. Rather than just providing a simple Web portal where your customers can enter orders and view information — CorrChain integrates your customers' business systems with your own. Your customers enter orders into their own business system, and CorrChain delivers them into yours — without user intervention — saving time and money for all supply chain partners.

CorrChain translates data between business systems and supports a number of methods of data transfer — including EDI and XML — to automate supply chain processes between partners.

CorrChain gives you the ability to connect with your customers and suppliers — improving and automating your essential business processes — these processes include:

- Issuing requests for quotes
- Creating purchase orders
- Automated transmission of ASN and BOL
- Order promising and sales order acknowledgement
- Order exception handling
- Order changes or cancellations
- Electronic invoicing and EFT
- Automated roll stock reports
- and more...
