v2.13.5 Enhancements

This section summarizes the product enhancements in EFI Technique DMI v2.13.5 by module, including the corresponding issue number.

Paper Monitor

Issue: For a short period after a job end it was possible for an operator to load a fully consumed reel with its original gross weight. This resulted in the reel having an additional consumption record in inventory Management.

Resolution: Paper Monitor will no longer permit a fully consumed reel to be loaded. Any attempt to do so will be recorded in the log. The warning that a reel is loaded on another reelstand has been improved with a new message window and the event will be recorded in the log.
