

Fiery external print servers: Top reasons to buy the Fiery IC-313 server

Because the investment horizon for a new digital printing system is from three to five years, it's always good to consider both current and future needs of your print environment when deciding on a new digital printing system. EFI™ offers two Fiery® server platforms for the Konica Minolta AccurioPress C3080/C3080P/C3070/C3070P/C2070/C2070P/C2060 and AccurioPrint C2060L/C3070L (for IC-417 only) – the external Fiery IC-313 server and the embedded Fiery IC-417 server. These two server platforms vary by the level of PDF-processing controls, automation, productivity, workflow integration and expandability they offer. This document helps you understand the benefits of an external Fiery server, how it meets your current needs and how it offers built-in flexibility for future growth.

Fiery IC-313 server only: Standard features

The Fiery IC-313 server comes with standard features that add productivity, quality and new services to your production environment. These features are not available on the Fiery IC-417 server.

1. Faster turnaround times

To maximize your engine capacity, you need a high-powered digital front end to process and drive data fast enough to minimize engine idle time. More robust and powerful hardware specifications make the Fiery IC-313 server more than 2.5x faster than the Fiery IC-417 server, making them the best choice for demanding production environments.

2. Flexible variable data printing (VDP) services

The robust, open, flexible, and scalable Fiery solution supports all leading VDP formats including PDF-VT, Creo VPS and PPML, and works with all leading VDP composition software and formats for seamless workflows. The faster processing speed also makes offering VDP services more profitable.

Fiery IC-313 server only: Standard features (continued)

3. Perfect PDF printing in a pure PDF workflow

Fiery external servers include the Adobe® PDF Print Engine (APPE) interpreter for end-to-end native PDF workflows. This allows consistency and flexibility from design to output in hybrid digital and offset print environments, and also ensures correct representation of color spaces and transparencies.

4. Integration with transactional printing workflows

The Fiery external server can adapt to legacy transactional printing workflows with features such as Set Page Device to define media pulls and map the output destination, and Sequential Print to ensure the order of the final output is correct.

5. Windows® Embedded 8.1 Pro OS flexibility

Fiery external servers comply with the latest corporate IT standards and provides more efficient administration and implementation of security patches. You can also easily implement standard industry practices such as running anti-virus software.

6. Don't touch what you can automate

The free Fiery JobFlow™ Base comes pre-installed on the external server, ready to use to build your most common workflows. Submit files to the proper location or just drag and drop them right on to the workflow. Perform essential job processing tasks and receive email notifications on job progress. Archive jobs at various processing stages for later reuse.

Upgrade to the paid version, Fiery JobFlow, for cost-effective, advanced prepress capabilities. You can easily configure automated job workflows including preflight, correction and editing of PDF files, plus approval, scripting and job ticketing.

Fiery IC-313 server only: Optional features

The Fiery IC-313 server offers optional software and hardware solutions that add advanced prepress, makeready, automation and workflow integration for high-production print facilities. These features are not available on the Fiery IC-417 server.

1. The ability to identify and troubleshoot file problems before it's too late

Fiery Preflight, a feature in the Fiery Graphic Arts Package, Premium Edition, quickly checks for missing spot colors, VDP elements, or low resolution images. It prevents problem jobs from printing and helps troubleshoot issues faster.

2. A centralized production workspace for operators

Operators can make pre-production changes from a local monitor, keyboard and mouse. Or you can upgrade to the Fiery Integrated Workstation with a custom furniture stand. The monitor displays the Fiery Ticker for an at-a-glance view of the printing status at a distance.

3. Secure storage for print files

The optional removable hard disk drive allows you to lock the server drive into the system for normal operation and remove it to a secure location after powering down the server.

Fiery IC-417 server: Optional features

While these features are standard on the Fiery IC-313 server, you may add them as options to the Fiery IC-417 server by purchasing the Fiery Productivity Package or stand-alone software tools. Be sure to compare the cost of the embedded Fiery IC-417 server with the additional software added for a more accurate comparison to the external Fiery IC-313 server.

1. Automated job submission that eliminates touch points

Workflow automation in the job submission process with Hot Folders and Virtual Printers reduces errors and saves time, while allowing operators to give more attention to other jobs that require specific finishing and color settings.

2. Superior photographic prints

Image Enhance Visual Editor, a Command WorkStation® plug-in, allows operators to make last-minute edits to a selected image without having to open the image in applications such as Adobe Photoshop®.

3. Automated web-to-print submission, and integration with EFI MIS systems

Fiery servers are certified by CIP4 job definition format (JDF) IDP-ICS. By adhering to this standard, Fiery servers integrate seamlessly with EFI MIS and web-to-print systems as well as with industry-leading third-party prepress workflow solutions such as Agfa Apogee, Heidelberg Prinect and Kodak Prinergy. This helps you more efficiently deliver job specifications, update job status in real time, track job costing data and validate equipment usage.

4. Accelerated production with prepress workflow automation

Enable the free Fiery JobFlow Base on an embedded Fiery server with a valid Fiery Productivity Package license and start building ready-to-use workflows.

Once Fiery JobFlow Base is enabled, upgrade to a paid license for the full version, Fiery JobFlow, for advanced prepress capabilities. You can easily configure automated job workflows including preflight, correction and editing of PDF files, plus approval, scripting and job ticketing.

Server comparison

FIERY SERVER	EXTERNAL - FIERY IC-313 V2.1	EMBEDDED - FIERY IC-417 V2.1
Fiery Software	Fiery FS300 Pro	Fiery FS300
Fiery Platform	PRO [®]	E ⁴⁰⁰
CPU	Intel® Core™ i5-4570S Processor 2.9 GHz up to 3.6 GHz, Quad Core	Intel® Pentium® Processor G4400, 3.3 GHz, Dual Core
Operating System	Microsoft® Windows® 10 IoT Enterprise 2016 LTSB	Linux
