

Fiery JobFlow 2.5 *efi*[®]

What's new and improved in this release?

New feature overview

Feature	Availability
Collect Exact Match	Fiery JobFlow Base
Fiery XF step & repeat and nesting	Fiery JobFlow Base
64-bit OS support	Fiery JobFlow Base
Master Variables	Fiery JobFlow
EFI Digital Storefront Support	Fiery JobFlow

Version compatibility

- Fiery JobFlow 2.5 is backwards compatible with Fiery Command WorkStation versions 5.8-6.2
- If you update to Command WorkStation 6.3, you **must** also update to JobFlow 2.5

Collect Exact Match

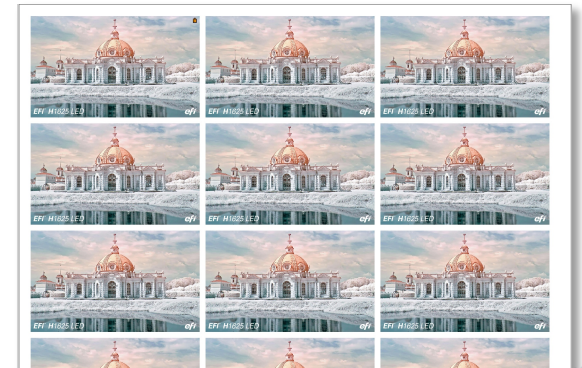

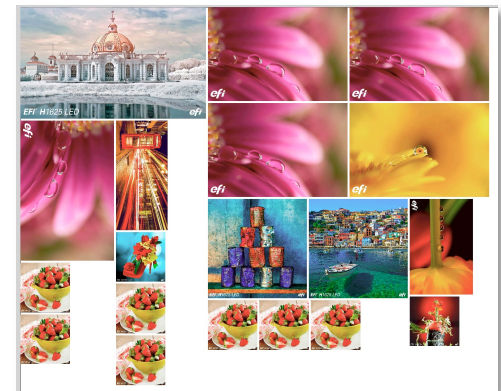

- Allows jobs to be released when an exact number of pages is reached
 - Batches jobs to reach desired page count
- Example: a company's business card run is always 24-UP and 250 sheets. JobFlow will release the job when enough business cards are received to fill 250 sheets.

A screenshot of the JobFlow software interface, specifically the 'Add Module' dialog box. The dialog has a light blue header with the title 'Add Module' and a subtitle '(Please select a module below and click \'Add\' button)'. Below the header is a row of eight icons representing different modules: Collect, Flary Preflight, Image Enhance, Impose, Approve, Correct, Connect, and Preflight. The 'Collect' module is selected. Below the icons is the 'Collect Settings' section. It contains two radio buttons: 'Job Count' (unselected) and 'Page Count' (selected). Under 'Page Count', there is a text input field containing the number '250'. To the right of the 'Page Count' radio button is a checked checkbox labeled 'Exact Match'. Below these settings are two dropdown menus: 'Release jobs:' set to 'Merged' and 'By submission time'. At the bottom are 'Add' and 'Cancel' buttons. A red rectangular box highlights the 'Page Count' radio button, the 'Exact Match' checkbox, and the '250' input field.

Fiery XF step & repeat and nesting

- Supports step & repeat and nesting workflows in Fiery XF
 - Create customizable workflows and action lists to improve production efficiency

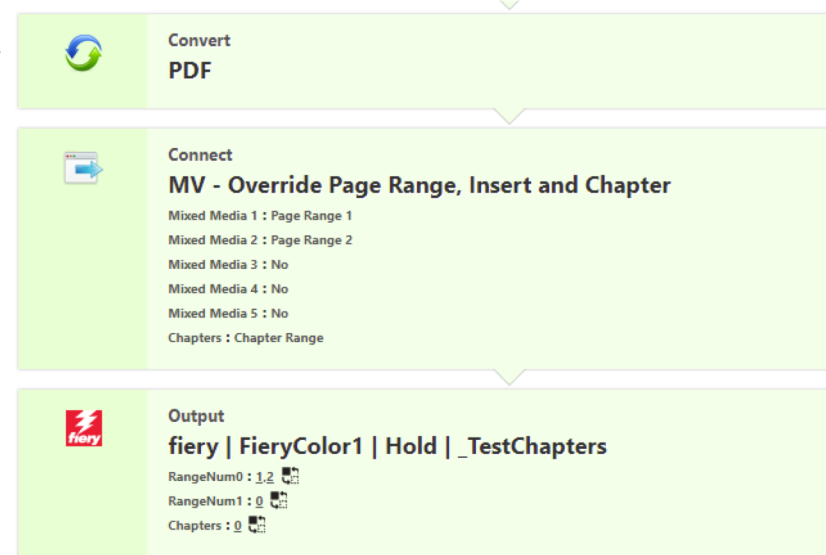

64-bit OS support

- JobFlow 2.5 supports 64-bit operating systems
 - 32-bit Windows operating systems are no longer supported in this version
- Now supports Windows Server 2016

Master Variables

- Master Variables are Connect scripts that override settings of a JobFlow module
 - Works with Connect, Correct, Preflight, and Output modules
- Enables on-the-fly customization of workflows for specific jobs
- Requires Connect scripting, more details in [JobFlow Connect Cookbook](#) (English only).

Master Variables – Use Cases

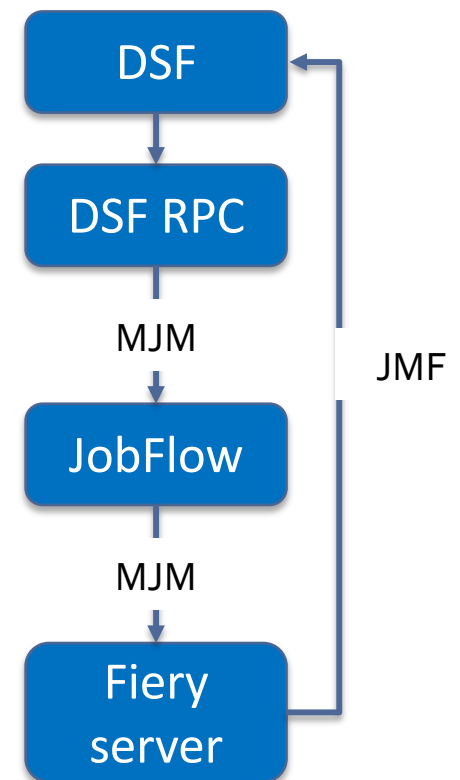

Use XML, JSON, CSV, PDF metadata, etc to

- Override Fiery Job Properties
 - Dynamic page ranges, inserts, chapters
 - “Set blue stock for all pages with word ‘BLUE_STOCK’”
 - “Add insert from Tray 4 before a page with barcode image”
 - “Set simplex for every 12th page”
 - Quantity, Color and IQ, Finishing, FreeForm Master
- Use Correct and Preflight instead of 3rd party tools
 - “Add a blank page if page has 16 number code in left margin”
 - “Add customer info in trim box area”

EFI Digital StoreFront Support*

- JobFlow enhances [EFI Digital StoreFront](#) (DSF) capabilities with the ability to manipulate or fix PDF files
 - Examples include:
 - Convert pages from color to black & white
 - Adjust document bleed
 - Enhance images
 - Remove layers from a PDF
 - And more!
- Preserves JDF workflow
- Reports job status back to DSF

*Requires DSF Remote Print Center
