

# What's New - Fiery<sup>®</sup> Color Profiler Suite v5.1 *efi*<sup>®</sup>

# New features in version 5.1

---

- New Color Verification workflow
- Printer Match Updates
  - Optimize common gamut to provide matching as engines wear in
  - Create Server presets for matching
- New Device Support
  - Barbieri LFP qb

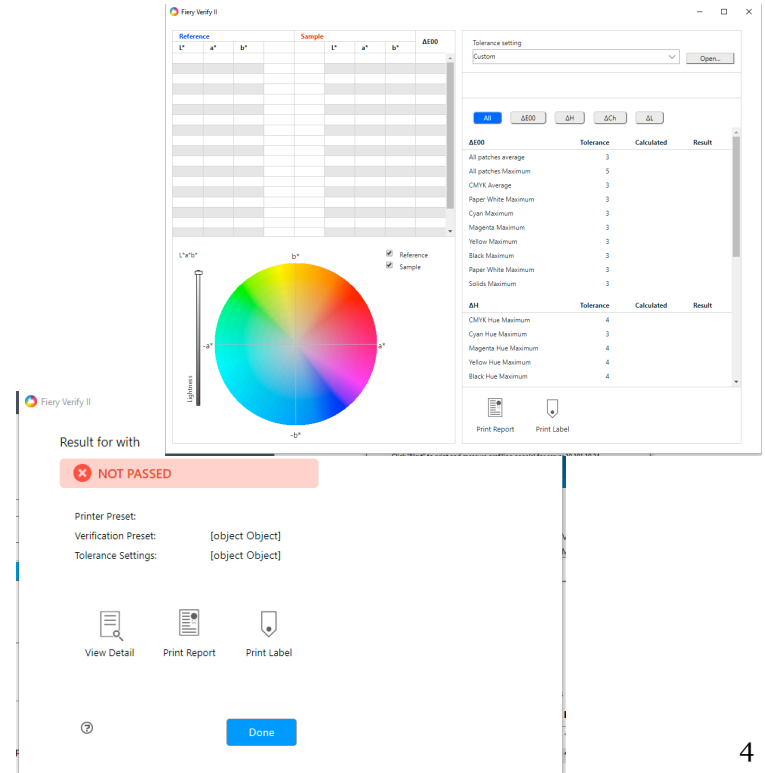

# Color Accuracy

# Verifies Color Accuracy to ensure Prints Match

- New Verifier Module
  - Improves consistency between CWS and CPS
  - Streamlines and accelerates verification process for cutsheet, high-speed inkjets and textile print systems
  - Pull relevant information together and generate reports

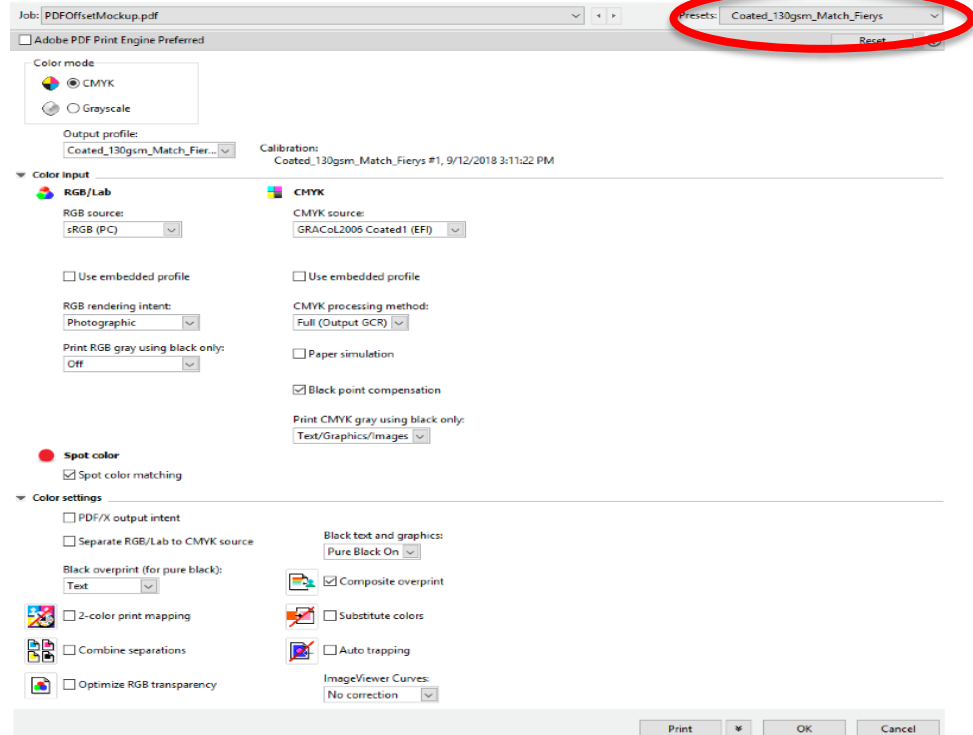

# Printer Match

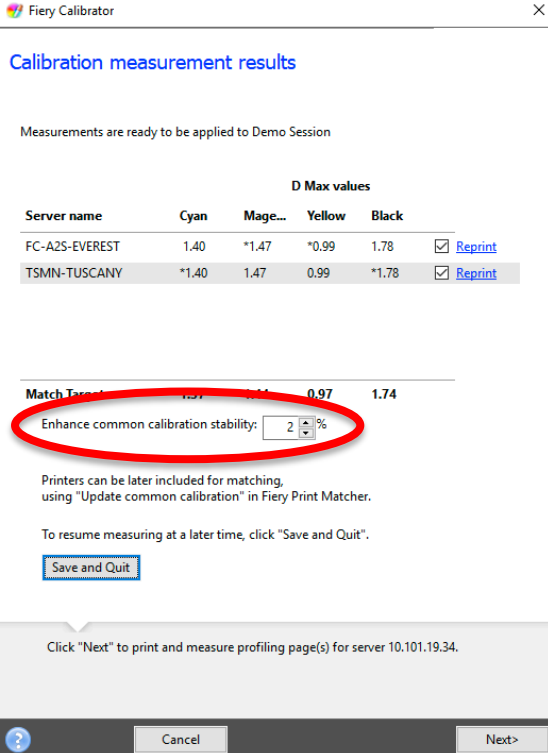

# Server Presets

- Printer Match Module creates Server Presets
  - Improves ease-of-use for operators to select the settings needed to match multiple print systems
  - Preset selects common gamut calibration and profile created in Printer Match

# Common Gamut Stability Control

- Improves capability to match multiple printers over time
  - Reduces shared gamut of multiple Fiery driven printers so that they can maintain color match over time
  - Eliminate reprofiling for multiple printers due to engine aging

The screenshot shows the 'Fiery Calibrator' application window. The title bar includes the application name and a close button. The main content area is titled 'Calibration measurement results' and contains the following text: 'Measurements are ready to be applied to Demo Session'. Below this is a table of 'D Max values' for two servers. The table has columns for 'Server name', 'Cyan', 'Magenta', 'Yellow', and 'Black', with checkboxes for 'Reprint' next to each row. The 'Match Target' row shows values for Cyan (1.40), Magenta (1.47), Yellow (0.97), and Black (1.74). A red circle highlights the 'Enhance common calibration stability' control, which is a dropdown menu currently set to '2%'. Below the table, there is a note: 'Printers can be later included for matching, using "Update common calibration" in Fiery Print Matcher.' and a 'Save and Quit' button. At the bottom of the window, a status bar contains a help icon, a 'Cancel' button, and a 'Next>' button. A footer note at the bottom of the window reads: 'Click "Next" to print and measure profiling page(s) for server 10.101.19.34.'

Server name	Cyan	Magenta	Yellow	Black	
FC-A25-EVEREST	1.40	*1.47	*0.99	1.78	<input checked="" type="checkbox"/> Reprint
TSMN-TUSCANY	*1.40	1.47	0.99	*1.78	<input checked="" type="checkbox"/> Reprint
Match Target	1.40	1.47	0.97	1.74	

Enhance common calibration stability: 2%

Save and Quit

Click "Next" to print and measure profiling page(s) for server 10.101.19.34.

# New Device Support

# New Device Support

- Supports intelligent color measuring device
  - Barbieri LFP qb spectrophotometer

# Supported Operating Systems and CWS compatibility

# Supported Operating Systems

- Fiery Color Profiler Suite 5.1 supports only 64-bit OS
  - Compatible with MacOS 10.11 and above (64 bit only)
  - Compatible with Windows 7 (SP1), 8.1, 10 and above (64 bit only)

# CWS compatibility

- Fiery Color Profiler Suite 5.1 requires CWS 6.3 or newer
  - 64-bit CWS
  - Integration touchpoints from Device Center and Fiery Calibrator not functional with CWS 6.2 and older

## Fiery Color Profiler Suite

Color management software and spectrophotometers

Integrated color management and measurement software for printing systems  
Fiery® Color Profiler Suite includes expert-level tools and works with spectrophotometers allowing you to:

- Create, edit and maintain color profiles
- Successfully match color to a color reference
- Match output across multiple printers to achieve shop-wide consistency

[Free Demo](#)

[View the PODi Product Briefing](#)

Color Profiler Suite also supports our EFI wide and superwide format [inkjet printers](#).
