# Manor & Mason Color Poster Description

Possible errors in the reproduction of design elements.

This print sample demonstrates key Fiery® color management capabilities:

- Achieves the best match for spot colors
- Correctly prints transparencies and overprints every time
- Manages multiple color spaces in a single document
- Independently honors embedded profiles for CMYK, RGB, and grayscale images
- Improves low-resolution images
- Helps avoid registration imperfections
- Ensures black elements use black toner only

The image on the right indicates many of the settings users can check to reliably achieve the best quality output.

For additional information on Fiery color settings, visit the Fiery Color and Imaging web page at [fiery.efi.com/color](https://fiery.efi.com/color), where you can find:

- Fiery Color Best Practice Settings document
- Fiery Color Best Practice Settings video

To access webinar recordings about color management, visit the World of Fiery series at [efi.com/wofwebinars](https://efi.com/wofwebinars). Select past recordings for Fiery Color and Imaging products to view the "Fiery Command WorkStation® 6 — Configuring color settings and best practices" webinar.

To properly configure print settings using the Fiery driver and Job Properties, select the following options:

To render RGB transparencies with Adobe PDF Print Engine (APPE) processing path:

- ☒ Optimized RGB transparency
- ☒ Use RGB embedded profiles

To achieve the best match for brand colors:

- ☒ Spot color matching

For CMYK or spot color overprints:

- ☒ Composite overprint

To avoid registration imperfections:

- ☒ Auto trapping

To improve the quality of low resolution images:

- ☒ Image smoothing

To respect a source RGB profile:

- ☒ Use RGB embedded profiles

For CMYK or spot color overprints:

- ☒ Composite overprint

To respect a source CMYK profile:

- ☒ Use CMYK embedded profiles

For drop shadows on top of spot colors:

- ☒ Composite overprint

To reproduce 100% black elements:

- ☒ Black text and graphics: Pure Black On

To achieve the best match for brand colors:

- ☒ Spot color matching

To respect a source Grayscale profile:

- ☒ Use Gray embedded profiles
