

# Top reasons to buy the imagePRESS Server L30 V2

Because the investment horizon for a new digital printing system is from three to five years, it's always good to consider both current and future needs of your print environment when deciding on a new digital printing system.

EFI™ offers two Fiery® servers for the Canon imagePRESS C170 Series – the external imagePRESS Server L30 V2, and the embedded imagePRESS Server M10 V2. These two server platforms vary in the level of PDF processing controls, automation, productivity, workflow integration and expandability they offer. This document helps you understand the benefits of an external Fiery server, how it meets your current needs and how it offers built-in flexibility for future growth.

## imagePRESS Server L30 V2 only: Standard features

The imagePRESS Server L30 V2 comes with standard features that add productivity, colour quality, and new services to your production environment. These features are not available on the imagePRESS Server M10 V2.

### 1. Optimal print output

Fiery external servers running on Fiery FS400 Pro software include Fiery JobExpert that lets you reduce setup time, enables faster processing, and cuts waste. Fiery JobExpert analyses each PDF print job in detail and sets the best Fiery job settings for colour management, image quality, VDP settings, and engine-specific properties.

### 2. Flexible variable data printing (VDP) services

The robust, open, flexible, and scalable Fiery solution supports all leading VDP formats including PDF-VT, VPS, and PPML; and works with all leading VDP composition software and formats for seamless workflows. The faster processing speed also makes offering VDP services more profitable.

## imagePRESS Server L30 V2 only: Standard features (continued)

### 3. Perfect PDF printing in a pure PDF workflow

Fiery external servers include the Adobe® PDF Print Engine (APPE) interpreter for end-to-end native PDF workflows. This allows consistency and flexibility from design to output in hybrid digital and offset print environments, and also ensures correct representation of colour spaces and transparencies.

### 4. Fiery deployable image

Service technicians can save time when installing multiple Windows-based Fiery servers in a single organisation. The Fiery deployable image captures a distributable image of a fully configured Fiery server including Fiery patches, Windows® security updates, and user configurations.

### 5. Microsoft Windows 10 IoT Enterprise 2019 LTSC

Fiery FS400 Pro external servers use Windows 10 IoT Enterprise 2019 LTSC as their operating system. This Windows edition contains the latest security protections and includes the cumulative feature enhancements provided in Windows 10 versions 1703, 1709, 1803, and 1809.

### 6. USB security

Maintain a secure print environment. Fiery external servers prevent connection of USB storage devices and disable Fiery features that require USB mass storage functions, such as backup and restore.

### 7. Fiery QuickTouch software

The imagePRESS L30 V2 features **Fiery QuickTouch™ software** on the touchscreen display, which gives faster views of job status information and access to server management. With just a tap, the touchscreen display gives operators easy access to intuitive system installation, backup and restore functions, plus system diagnostics.

### 8. Unified user interface

Save time and work more efficiently by using the power of Unity Display to switch between Command WorkStation® workflow screens and the imagePRESS Server L30 V2 control panel to manage job queue and adjust engine settings remotely.

### 9. A way to offer pad printing

With external Fiery servers, operators can print pads with ease from a single-page job, and with minimal manual collation of the printed output.

## imagePRESS Server L30 V2: Optional features

External Fiery servers offer optional software and hardware solutions that add advanced prepress, makeready, automation, and workflow integration for high-production print facilities. These features are not available on the imagePRESS Server M10 V2.

### 1. A centralised production workspace for operators

Operators can make pre-production changes from the **Fiery NX One Station**, a higher-efficiency, ergonomically designed work area. The monitor displays the Fiery Ticker for an at-a-glance view of the printing status from a distance.

---

### 2. Secure storage for print files

The optional removable hard disk drive allows you to lock the server drive into the system for normal operation and remove it to a secure location after powering down the server.

## imagePRESS Server M10 V2: Optional features

While these features are standard on external Fiery servers, you may add them as options to the imagePRESS Server M10 V2 by purchasing the Fiery ColorRight Package, Fiery Automation Package, or standalone software options. Be sure to compare the cost of the imagePRESS Server M10 V2 with the additional software added for a more accurate comparison with the imagePRESS Server L30 V2.

### 1. Automated Web-to-Print submission, and integration with EFI MIS systems

Fiery servers are the only DFE certified by CIP4 job definition format (JDF) IDP-ICS. By adhering to this standard, Fiery servers integrate seamlessly with EFI MIS and Web-to-Print systems as well as with industry-leading third-party prepress workflow solutions such as Agfa, Apogee, Heidelberg Prinect, and Kodak Prinergy. This helps you more efficiently deliver job specifications, update job status in real time, track job costing data, and validate equipment usage.

### 2. Superior photographic prints

Image Enhance Visual Editor, a Command WorkStation plug-in, allows operators to make last-minute edits to a selected image without having to open it in applications such as Adobe Photoshop®.

### 3. Full control of your print queue for changing job priorities

Print/Process Next, Rush Print and Schedule Printing offer a variety of advanced queue management features to control and adjust print priorities on the fly.

### 4. Don't touch what you can automate

Enable the free Fiery JobFlow Base™ on an embedded Fiery server with Fiery Automation Package and start building ready-to-use workflows. You can easily configure automated job workflows including correction and editing of PDF files, plus approval, scripting, and job ticketing. For advanced prepress capabilities, upgrade to a paid license for the full version, Fiery JobFlow.

## Server comparison

FIERY SERVER	EXTERNAL- IMAGEPRESS SERVER L30 V2	EMBEDDED- IMAGEPRESS SERVER M10 V2
Fiery System Software	Fiery FS400 Pro	Fiery FS400
Fiery Platform	NX One	E <sup>400</sup>
