

Turnkey implementation designed for EFI Pace

The EFI™ Pace™ solution is delivered on a fully configured EFI Pace Appliance server, complete with performance metrics to fit your growing organization.

Pace Appliance

The Pace Appliance is a “turnkey solution” delivered on a pre-configured server complete with performance metrics to fit your growing organization.

Our Linux based appliance allows for a high level of security while minimizing virus threats and upgrade requirements.

Further, EFI remotely troubleshoots from our data center, alleviating the need for extensive administrative support, which further reduces your total cost of ownership.

Benefits

- Improves reliability with a highly tuned server that is built with only the specific items necessary to maximize the solution performance
- Improves overall customer satisfaction with limited and minimal IT investment
- Improves options in implementation with the ability to bring EFI Pace setup with no disruption of equipment in the office
- Remote access software configured for support and troubleshooting
- A Web server configured to allow internal and external access with security and permissions
- A Web reporting engine configured for web reporting from the appliance and an optional Custom Reporting module.

Virtual Appliance

The Virtual Appliance deployment model enables a client to run the EFI Pace application from within an existing virtual machine infrastructure. This deployment model reduces hardware maintenance costs with fewer physical servers, increases space utilization in the data center, simplifies back up processes, and enables greater portability for future hardware upgrades.

Allocated resources to the virtual appliance, equivalent to the following:

- **Processor:** Intel® Xeon® Silver 4114 Processor 13,75M Cache, 2.20GHz or better
- **Memory:** 32GB minimum (48GB for good, 64GB for better, and 96GB for best performance)
- **Virtual Cores:** 4vcpu will be adequate in most cases. However, if you allocate 64GB ram or more then allocate 8vcpu
- **Hard Drive:** 1TB free space (NOTE: Pace is very disk i/o intensive therefore make sure your disk and raid controller are as fast as possible. Using SSD drives are highly recommended.)
- **NIC:** Gigabit Network Adapter
- A VMWare ESXi (6.7 or higher) or Microsoft Hyper-V (2019 or higher) based host for the virtual appliance

Virtual Appliance Benefits

With an EFI Pace Virtual Appliance you can choose your own hardware specifications and scale resources to maximize these specs at a lower initial cost. You can use hyper visor for additional high availability as well as utilize the ease that comes with updating your entire virtual machine through software which allows for lower operating costs and a consolidation of resources.

Deploying a new virtual machine is easy and efficient and downtime with disaster recovery is minimized; multiple suite applications can be installed on one physical server.

Major upgrades for Pace are easier and many of your other EFI products also run in a virtual environment allowing for better integration and seamless flow of information. Also, virtual machines are hardware agnostic, there is no physical host that can be put into End of Life.

EFI Hosted Solution Benefits

The enterprise software that EFI develops includes advanced Web application that are in the cloud - hosted and delivered to you over the internet. They are designed with security, availability, and performance in mind. The result is a secure means of doing business via e-commerce and e-production with your customers using standard Web browsers. The benefits of using a cloud application include avoiding the expense of on-site hardware and being assured of real-time maintenance at the hosting facility.

Additional benefits you receive while hosting with EFI:

- EFI handles the infrastructure
- EFI handles the DR
- 99%+ uptime for the infrastructure
- Allows you to focus on your business and maximizing workflows instead of worrying about IT needs

EFI fuels success.

We develop breakthrough technologies for the manufacturing of signage, packaging, textiles, ceramic tiles, and personalized documents, with a wide range of printers, inks, digital front ends, and a comprehensive business and production workflow suite that transforms and streamlines the entire production process, increasing your competitiveness and boosting productivity.
