

Increase productivity and quality.

The Fiery Productivity Package option for Fiery embedded servers includes a set of features essential for professional printing environments.

Image Enhance Visual Editor applies automatic enhancement to optimize image quality without going back to native applications.

- Automated job submission features for increased productivity
- Advanced queue management controls to manage print priorities without disrupting production
- Image and color quality adjustment tools for last-minute image editing, right in Fiery Command WorkStation®
- Spot color editing for accurate reproduction of brand colors
- Powerful softproofing and color management tools to minimize errors and waste
- JDF technology to automate and integrate business and print processes for higher efficiency and increased profit

What's included

The set of features included in a Fiery Productivity Package varies by Fiery server and print engine combination. Please check the EFI Website for engine-specific information.

FEATURE	DESCRIPTION
Fiery Hot Folders	Automates the job submission process and batch processing of multiple files with the same print settings
Graphic arts filters for Hot Folders	Automates job submission through Hot Folders for graphic arts file formats
Fiery Virtual Printers	Configures specific "File-Print" submission process for an output device so users don't have to specify print settings for multiple jobs
Schedule Print	Balances workload and prioritizes print production to minimize production peaks and eliminate bottlenecks
Rush Print	Allows users to process and print an urgent job immediately, then resume the interrupted job without having to discard the previously printed portion
Print/Process Next	Lets the operator pick the next job to process or print immediately after the current job
Fiery Spot-On™	Edits spot color reference libraries or adjusts CMYK equivalents and RGB values for closer spot color matching on specific engines or print substrates
Composite overprint for spot colors	Allows objects specified to correctly overprint in composite PostScript and PDF files
Fiery Image Enhance Visual Editor	Adjusts individual images for brightness, contrast, highlights, shadows, color balance, and sharpness without opening and editing the file in the originating application
Fiery ImageViewer	Enables the user to visually check the final processed job before printing and apply color adjustments
Postflight report	Delivers color-coded job diagnostic reports to quickly and easily identify potential printing issues such as mixed source colors and missing spot colors
Control bar	Provides color quality control by placing the Ugra/Fogra Media Wedge, an industry-standard color bar, and job settings on every printed page
Configurable auto trapping	Controls trapping parameters and corrects misregistration in composite or separated documents
Paper simulation	Achieves accurate output simulations for special media by manually adjusting the hue, brightness, and saturation of the paper substrate being simulated
Fiery JDF	Enables built-in JDF-based integration support to automate processes from job submission to output by integrating print workflow and business management systems so that job information can flow through the systems with less touch points and errors

EFI fuels success.

From Fiery to superwide inkjet, from the lowest cost per label to the most automated business processes, EFI has everything your company needs to succeed. Visit www.efi.com or call 650-357-3500 for more information.

Nothing herein should be construed as a warranty in addition to the express warranty statement provided with EFI products and services.
