

Fiery Productivity Package

For the Fiery Color Controller E-22B

Achieve the Maximum Productivity and the Right Color Quickly

Meeting tight turnaround times and producing top-notch color documents the first time are critical to your business success. The Fiery® Productivity Package helps you accomplish both goals while producing faster turnaround times, error-free color and process automation to make you much more productive than ever before.

With the Fiery Productivity Package, you can take advantage of Fiery's powerful features to do things such as:

- Troubleshoot color issues effectively to get jobs printed right quickly with Postflight and Fiery ImageViewer.
- Achieve accurate spot color matching across documents with Fiery Spot-On®.
- Eliminate bottlenecks and optimize production while maximizing throughput with Rush Print and Print/Process Next.
- Automate job submission to shorten setup times and decrease print errors with Hot Folders and Virtual Printers.

Produce the Right Color with Advanced and Intuitive Color Management Tools

Harness Dynamic Prepress Capabilities

Fiery ImageViewer gives you fast local and remote soft-proofing tools for amazing preview and color editing capabilities in Fiery Command WorkStation®. It's the ideal tool for inspecting color accuracy and trapping effects and screen patterns.

PostFlight Report offers you the ultimate job diagnostic tool using Fiery color management technology. The color coded reports enable you to identify potential printing issues, such as mixed source colors and spot colors, quickly and easily in the output.

Image Enhance Visual Editor offers an interactive toolset for optimizing image appearance and doing custom corrections fast. It gives the control to adjust brightness, contrast, highlights, shadows, color balance and sharpness, and it makes red-eye corrections on any image.

Leverage Proofing Tools for Greater Color Control

By using the **Control Bar**, you get effective color quality control, consistent results and job identification on every printed page by applying customized dynamic job information and images, including logos, company names or color bar.

With **Paper Simulation**, you can achieve accurate output simulations on special media, such as newspaper, yellow pages and packaging, by adjusting the hue, brightness and saturation of the paper substrate being simulated. You also can get those values automatically by reading the paper color with the ES-2000 spectrophotometer.

Image Enhance Visual Editor applies automatic enhancement to optimize image quality without going back to native applications.

Fiery Productivity Package

With **Fiery Spot-On**, you can achieve accurate color matching across documents and printers from any application, including Microsoft® Office®. Manage CMYK, RGB and named colors on the Fiery controller, including all PANTONE, HKS, Toyo and DIC names, in Adobe® PostScript® or PDF documents. In addition, you can custom-create or edit colors with an intuitive user interface. The software also integrates the ES-2000 spectrophotometer to create new spot colors from a color swatch.

Hot Folders feature works with the following file formats:

Input formats:

- PS, PDF, EPS, VDP
- Microsoft® Office Filters: DOC, DOCX, XLS, XLSX, PPT, PPS, PPTX, PPSX, PUB
- Graphic Arts Filters for Hot Folders: JPEG, TIFF/IT, CT/LW, PDF2Go, Export PS and DCS2

Virtual Printers also makes printing on the Fiery even easier. Now, you can streamline job setup times and eliminate print errors on repetitive print jobs. By using predefined job settings in the print driver, regular print jobs can be automated in a snap, reducing errors for trouble-free printing.

Integrate Your Workflow and Stretch Your Business

Graphic Arts Filters for Hot Folders enables you to take advantage of drag-and-drop functionality to automate job submission for more file formats. With these filters, your print jobs can be submitted by simply dragging and dropping native file formats into Fiery Hot Folders without first opening the native applications. Supported file formats include: JPEG, TIFF/IT, CT/LW, PDF2Go, Export PS and DCS2.

Imagine the time you can save when printing a photo contact sheet by simply dropping multiple JPEG photos into a Hot Folder programmed with n-up imposition. The Fiery server will merge the JPEG photos into one file and do the imposition layout automatically to guarantee error-free results.

The **PDF/X Preflight Filter** enables you to verify the compliance of all PDF files with PDF/X-1 and PDF/X-3 specifications and guarantee consistent print output throughout the shop.

Get Efficient Printing with Advanced Job Management

Get full control of your job priorities with **Rush Print and Print/Process Next**. Rush Print allows you to mark one print job as urgent, so it can be processed and printed immediately. It even interrupts a job that is currently printing. Print/Process Next gives you the ability to make a job print immediately after completing the job that is currently printing.

Balance your workload and prioritize print production throughout the day with **Schedule Printing**. This feature helps you minimize production peaks and bottlenecks.

Edit spot colors with Fiery Spot-On

Boost Your Productivity with Advanced Production Tools

Automate Job Submission for Error-Free Output

Hot Folders enables you to do more work by automating the job submission process, reducing errors and automating repetitive tasks with a simple “drag-and-drop” operation. The feature can be published and shared with multiple users in your network, enabling faster, error-free printing.
