

# Fiery E-83 server vs. E-43 server

## The right choice for your customer

Ricoh® offers two Fiery® servers designed for the Ricoh Pro C9100/C9110: the Fiery E-83 and the Fiery E-43. These two solutions address the speed and throughput required by different production environments. This document will help you identify the correct solution for your customer.

## When either Fiery server is appropriate

### Production-level tools

Both Fiery servers include advanced job management tools to maximise the engine's throughput.

### Integration with JDF and workflow solutions

Both Fiery servers allow connectivity with EFI Web-to-Print and MIS Solutions, as well as with popular industry workflow solutions such as Kodak® Prinergy®, Agfa® :APOGEE™ and Heidelberg® Prinect®. This integration enables job information to flow through the system faster and more efficiently to reduce human error and save time.

### A pure PDF workflow

Both Fiery servers integrate Adobe® PDF Print Engine (APPE) technology to offer a choice of end-to-end native PDF workflow or legacy workflows. This provides consistency and flexibility from design to output in digital and offset print environments.

### Accurate, consistent colour

Both servers render all combinations of colour spaces and transparency blends correctly using industry-standard tests such as Altona Test Suite 2. They offer default settings that maximise performance with the best colour quality right out of the box. They can also sharpen images, smooth flesh tones and enhance the natural colour of any photo in a document with the latest version.

### Powerful makeready solutions

Both servers include the most intuitive PDF-based imposition software that simplifies labour intensive tasks from any Windows or Mac client.

### Compatible with industry standards

Fiery servers support the most industry standards, including:

- EFI FreeForm™  
*Free, entry-level VDP technology*
- PPML 2.0/2.5/3.0
- PDF/VT 1 and 2
- Creo VPS™

Both Fiery servers carry the IDEAlliance Digital Press Certification, meeting or exceeding established industry tolerances for excellence in the areas of colourimetric accuracy, uniformity, repeatability, durability and registration.

POWERED BY  
Adobe PDF Print Engine

## When to choose the Fiery E-83 server

### **Your customers demand shorter run lengths and faster turnarounds**

A high-powered DFE, such as the Fiery E-83 server, processes and continuously drives the digital press to minimise engine idle time and utilise maximum engine capacity.

The Fiery E-83 server features the exclusive Fiery HyperRIP, a unique EFI technology that splits pages of an individual job to simultaneously process them with multiple processor cores, interpreters and rendering engines. The result is an increase in RIP speed by up to 55% on individual jobs, reducing data spikes to print engines and avoiding lost production time.

### **Operators need to make late-stage edits and corrections to files**

In demanding print environments, operators need to be able to easily perform late-stage edits to adjust colours, impose documents into booklets and preview full raster files. This ensures the highest quality before printing and minimal waste and rework.

For maximum productivity, all these operations should be performed through the most powerful available DFE, the Fiery E-83 server, which comes standard with Fiery Graphic Arts Package, Premium Edition. This application provides extensive prepress proofing capabilities with features such as preflight, postflight, halftone simulation, control bars and ability to process files with a large variety of prepress file formats. ImageViewer is also included for fast local and remote soft-proofing tools with amazing preview and powerful colour editing capabilities in Fiery Command WorkStation®.

### **Add value with powerful makeready tools**

In addition to Fiery Impose, Fiery E-83 server includes Fiery Compose, which provides an advanced preview and editing environment to simplify media assignments, tab printing, chapterisation and document finishing.

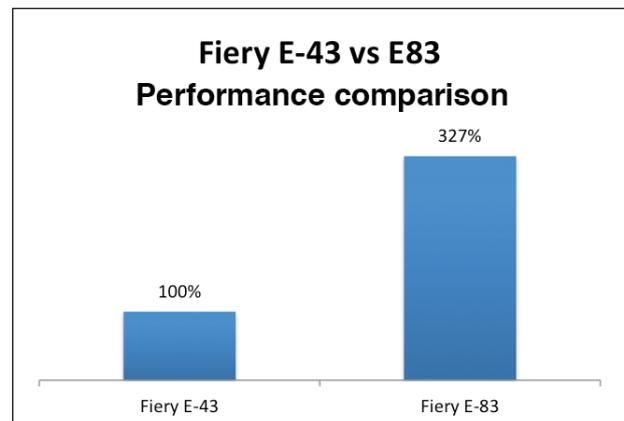

### **Meet increasing demand for Variable Data Printing**

Ensure that your customers are prepared to meet the increasing demand for variable data printing (VDP) over the life of the lease. The robust, open, flexible and scalable Fiery variable data printing solution supports all leading VDP formats, enables printing at maximum productivity and works with all leading variable data composition software and data formats for seamless workflows.

### **Ability to efficiently handle current and future complex and graphics-intensive files**

The Fiery E-83 server provides more power to cost-effectively handle the additional processing required to manage colour and images in complex files with multiple layers, transparencies and overprints.

The Fiery E-83 server is almost three times faster than the Fiery E-43 server, making it the best choice for demanding production environments and future-proofing your customer's investment.

## Key comparative features

FEATURE	FIERY E-83	FIERY E-43
