Supported Windows Versions and PrintSmith Vision v. 2.4

September 2015

Dear PrintSmith Vision Customer:

We at EFI are committed to providing our customers and partners with superior products and services. We strive to provide a broad range of solutions and continually review our solution portfolio to discover how we can strengthen it. Strengthening our product offerings leads us at times to retire previous versions of our products after new and enhanced versions have become well established.

In addition, as new versions of operating systems are introduced, we stop supporting older versions.

Windows 7 and Windows Server 2008 Effective December 2015

As of the December 2015 release of PrintSmith Vision, EFI will no longer support Windows 7 and Windows Server 2008. We recommend that you upgrade to Windows 10 or Windows Server 2012.

PrintSmith Vision v. 2.4 Effective March 2016

As of the March 2016 release of PrintSmith Vision, EFI will discontinue support for PrintSmith Vision 2.4 (and all earlier versions).

- Customers who are under a maintenance and support agreement can upgrade to the latest version of PrintSmith Vision.
- Customers who are not under a maintenance and support agreement are encouraged to contact their PrintSmith sales representative for information on upgrading to the latest release.
