# Pigment Inks

## *The EFI Reggiani commitment for sustainable solutions*

EFI Reggiani remains steadfast in its commitment to developing innovative solutions that carefully balance sustainability with machine performance. Our green processes focus on energy, water and ink savings, reducing color waste and stock, the use of recyclable materials, and a drastic reduction in pollution in every part of our supply chain, covering the full textile workflow.

Starting in 2010, EFI Reggiani digital printers are all certified with the ACIMIT (Italian Textile Machinery Manufacturers Association) “Green Label,” a certification that guarantees our commitment to offer eco-sustainable processes to our customers.

An abstract artistic composition featuring vibrant green and white paint splashes and brushstrokes. The top half shows a white background with green splatters and a large, swirling green brushstroke. The bottom half is a solid dark green band containing white text, with more green splatters and brushstrokes visible below it.

## *GEA Pigment Ink*

EFI Reggiani GEA pigment ink is the environment-friendly solution for the masters of pigment.

Brilliant colors increase the standard digital pigment gamut, reaching astonishing shades.

Plus, no need for washing makes the post-treatment process short and reduces water and energy consumption. EFI Reggiani GEA pigment inks deliver the highest light fastness in the ink range, combined with drop precision and high printability sharpness to satisfy both home textile and fashion requirements.

# IRIS Sublimatic Ink

Extended color gamut and high chroma guarantee stunning results to your digital textile printing. Plus, they're dual-use inks that perform astonishingly well whether used in sublimation or direct printing.

SUBSTRATE	APPLICATION
Polyester and elastomer fabrics (lycra)	Fashion, sportswear, home textile, and accessories
PROCEDURE	
Transfer printing: The printed paper must be transferred hot, through a calender or press at a temperature ranging from 392–410°F (200–210° C) for 30–60 seconds.	
Direct printing onto the fabric, followed by color drying and fixing (through heat press or calender) at a temperature ranging from 374–410°F (190–210° C) for 30–60 seconds. Direct printing allows a better penetration of the ink during the heat-fixing process.
