

CERTIFICATE OF CONFORMITY

ISSUED: MARCH 2025

EFI™ (Inks-Primer-Spares) are manufactured in strict adherence to a comprehensive set of internal specifications and rigorous quality control protocols. These specifications are designed to ensure that all products meet or exceed industry standards. Our internal quality assurance system continuously monitors and enforces compliance with these specifications, and no product is released for distribution unless it fully conforms to the prescribed requirements.

Parts, non-ink consumables, and spares are produced in accordance with the technical specifications mutually agreed upon with our authorized suppliers. Prior to shipment to EFI, all components undergo thorough inspection and testing to verify compliance with these agreed-upon specifications. Only after such verification are the components forwarded to EFI and subsequently delivered to our customers.

Due to the proprietary nature of our manufacturing processes, as well as the need to safeguard confidential business information, trade secrets, and intellectual property, we are unable to disclose the specific details of these specifications to customers. This policy is in place to protect our competitive advantage and ensure the continued integrity of our products and processes.
